

Modular Patch Panel SPXM

SPXM Series are modular patch panels for Keystone RJ-45 Jacks

These are Unshielded Keystone jack snap-in type patch panel (Empty / Unloaded Patch Panel) complements keystone jacks and offer a flexible patching solution.

The keystone jacks are ordered separately and quickly snap into blank patch panels.

This modular capability allows custom configuration of panels to suit a variety of applications.

Blank inserts are available to fill unused ports and can be replaced with active couplers when the need arises.

They have space for identity labels and each port is numbered

These panels are designed for mounting to 19" standard EIA racks. Mounting screws are included.

A 4 AWG grounding wire with spade terminal is provided and attached to the panel for grounding purposes.
